EDUCATION

University of Florida

Bachelor of Science in Computer Science

- **GPA:** 3.92/4.00

- **Relevant Coursework:** User Experience Design, Data Structures and Algorithms, Introduction to Software Engineering

Google UX Design Professional Certificate

Comprehensive UX Design/Research Training

Gainesville, FL

August 2024 – May 2028

Online / Coursera

March 2025 – October 2025

EXPERIENCE

UI/UX Designer

January 2025 – Present

Gator User Design

Gainesville, FL

- Delivered research-driven websites for on-campus clients with 4,200+ combined members, applying user-centered design (UCD) principles to drive a 500% combined increase in membership post-deployment.
- Conducted survey and generative user research to identify user needs and define key functionality, translating insights into 25+ high-fidelity Figma screens and interactive prototypes.
- Worked closely with cross-functional teams including Gator User Design project managers and student developers, scoping designs to match client development teams' technical capacity across projects.

PROJECTS

Carulla Case Study | *Figma, shadcn/ui, Jitter*

December 2025 – March 2026

- Designed a full-featured grocery app prototype from user research and persona development through wireframing, component architecture, and a 15+ screen high-fidelity prototype.
- Surveyed 25+ potential users to identify core grocery shopping friction points, surfacing that 61% identified with a nutritional goal or dietary restriction while 46% prioritized speed, directly defining the central design challenge of the project.
- Solved a core tension between nutritional awareness and browsing speed by designing a unified health score system, retaining trust through an optional score breakdown a single tap deeper.
- Built a 16-component design system on shadcn/ui with custom typography, color tokens, and Figma variables driving dynamic UI states across dietary filters, nutrition scores, and multi-user cart interactions.

Trajectory | *TypeScript, React, Plasmo, Figma, shadcn/ui, Cloudflare Workers*

May 2026 – August 2026

- Designed and shipped a visual trip-planning extension end-to-end, from UX research and interaction design through frontend, backend, and Chrome Web Store publication as a solo builder.
- Solved a core information-density problem in itinerary visualization by designing a non-linear timeline that scales gaps between events logarithmically, keeping short layovers and multi-day gaps both legible without misrepresenting duration
- Identified manual data entry as the primary friction point in itinerary creation and designed an AI-assisted autofill flow that reads booking confirmations directly from the browser tab and pre-fills structured trip data, allowing for entire itineraries to be added in a single click.
- Built the autofill pipeline end-to-end with a browser content script, serverless API proxy (Cloudflare Workers), and prompt-constrained LLM integration (Gemini), reducing extraction latency from up to 14s to under 3s through targeted model configuration.

Atrium - Hackathon Project | *Figma, React, TailwindCSS, Supabase, PostgreSQL*

January 2026

- Designed sitemap, UI, and user flows in Figma under time constraints, facilitating dev handoff for a cross-functional team.
- Built React components integrated with Supabase for real-time updates, shipping a demo-ready interface in 36 hours.

LEADERSHIP

First Year Product Design Team Lead

January 2026 – Present

Gator User Design

Gainesville, FL

- Facilitated twice-weekly meetings for a 6-member team, overseeing the end-to-end Product Design lifecycle and prototyping of an original app within a 5-week timeline.
- Standardized 6 curriculum modules into Figma templates to streamline the 5-week design sprint, ensuring all 6 team members met weekly milestones without sacrificing design quality.
- Facilitated feature prioritization and scoped product requirements down to a viable MVP, navigating time constraints to ensure a polished user flow was delivered without feature creep.

TECHNICAL SKILLS

Design: Figma, FigJam, TailwindCSS, shadcn/ui, Adobe Photoshop, Adobe Illustrator, Wireframing, Prototyping, Design Systems, User Flows, Information Architecture

Research: User Research, Usability Testing, Personas, Journey Mapping, A/B Testing, Competitive Audit, Surveys

Languages: TypeScript, JavaScript, C++, Python, HTML/CSS

Development: React, Next.js, Node.js, Plasmo, Vercel, Git
